DROID COMPANION

QUICK REFERENCE

IN PLAY

Command. Make a Focus Roll to command your droid. Spend a Hope to add one of its Experiences. On a success with Hope, you gain advantage on your next action that builds on it.

No Focus? Guardians and Soldiers use Instinct or Knowledge instead.

Attack. It gains any benefits that would apply only to you. On a success, its damage uses your Proficiency and its damage die.

Help an Ally. Spend a Hope to have it Help instead of you: a d6 advantage die, or a d8 when its Frame Feature applies.

Independent action. Once per rest, it takes one action on its own, with no command roll, if the action fits its programming.

DAMAGE AND REST

Taking damage. Attacks against it use its Evasion. Whenever it would take damage, it marks a Stress.

Offline. When it marks its last Stress, it drops out of the scene. It returns at the start of your next long rest with 1 Stress cleared, or sooner with the Repair Droid downtime move.

Recovering. When a downtime move clears your Stress, your droid clears the same amount.

GROWTH

Experiences. Whenever you gain a new Experience, your droid gains one at +2.

Standard Attack. At level 1: a d6 at Melee or a d4 at Close. Vicious Weapons steps the die or the range up.

Upgrades. Droid Pal: one at the start, then one at levels 2, 5 and 8. Mechanic: one every time you level up.

Reprogrammed. Former Function: an extra Experience at +2. Residual Directive: once per session, the GM can invoke its old programming as a complication; you gain a Hope.
